

Analysis/Results:

1. Name the colors that you created.
2. How many mL of liquid were in each test tube at the **start** of this lab?
3. Why is it important to follow directions **exactly**?
4. What would have happened if your measurements were not correct?
5. Look at your hands. Do you have any stains on your hands? If so, those stains represent **chemicals** that would be on your skin **right now!**
6. How many mL of liquid did you have at the end of the lab? How many should you have? What are some reasons why you may have more or less than when you started?

Conclusion:

2-3 sentences on what you learned.
